5. Implement Johnson Trotter algorithm to generate permutations.

```
#include <stdio.h>
#include <stdlib.h>
void swap(int* a, int* b) {
  int temp = *a;
  *a = *b;
  *b = temp;
void generatePermutations(int arr[], int start, int end) {
  if (start == end) {
    for (int i = 0; i \le end; i++) {
       printf("%d ", arr[i]);
    printf("\n");
  } else {
    for (int i = start; i <= end; i++) {
       swap(&arr[start], &arr[i]);
       generatePermutations(arr, start + 1, end);
       swap(&arr[start], &arr[i]); // backtrack
    }
  }
}
int main() {
  printf("Enter the number of elements: ");
  scanf("%d", &n);
  int* arr = (int*)malloc(n * sizeof(int));
  printf("Enter the elements: ");
  for (int i = 0; i < n; i++) {
    scanf("%d", &arr[i]);
  generatePermutations(arr, 0, n - 1);
  free(arr);
  return 0;
```

OUTPUT:

```
PS C:\Users\STUDENT\Desktop\ada lab> gcc jt.c
PS C:\Users\STUDENT\Desktop\ada lab> .\a.exe
Enter the number of elements: 4
Enter the elements: 1 2 3 4
1 2 3 4
1 2 4 3
1 3 2 4
1 3 4 2
1 4 3 2
1 4 3 2
2 1 3 4
2 3 4 1
